

Security Gate Installation - Full Turnkey Solution Delivered in Leeds

We recently completed a bi parting security gate installation for a valued customer in Leeds, providing a fully managed, turnkey service from initial assessment through to final commissioning. The project demonstrates our capability to deliver secure, reliable, and professionally engineered perimeter solutions for commercial and industrial sites.

Project Overview

A new security bi parting gate was required to improve site access control and strengthen perimeter protection. Our team handled the full process, ensuring the installation met operational, safety, and long term durability requirements.

Key Challenges Identified

- Need for a robust, secure gate system suitable for daily commercial use
- Integration with existing site layout and access routes
- Ensuring compliance with safety and operational standards
- Delivering a seamless installation with minimal disruption

Our Turnkey Solution

We provided a complete end to end service, managing every stage of the project:

- Engineering review and specification of the correct gate system
- Coordination of all installation works
- Professional fitting of the bi parting gate
- Final testing and operational checks
- Handover with full guidance for ongoing use

This aligns with our commitment to offering full turnkey solutions for gates and barriers, ensuring customers receive a fully managed, stress-free installation.

Enhanced Security

Robust bi parting gate strengthens gate strengthens perimeter protection.
